 Mark mounting hole locations  
 Drill holes and insert rawl plugs  
 Insert screws into rawl plugs leaving 5mm overhang

### Step-2

Place hooks just above screws, aligning keyhole slots over screws & then slot coat hook into place in a downwards motion

### Step-3

Ensure product is securely fixed in place prior to use

#### ⚠ Warning - A guide to wall mounting and fixings

Please ensure you use the correct screws / fixings for your type of walls and seek professional advice if you are not sure.

Failure of the product due to incorrect fixings is the responsibility of the installer.

Important: When drilling into the walls always check that there are no hidden wires or pipes etc.

**Types of walls**  
 You can use one of the following types of wall plug if your walls are made of brick, breezeblock, concrete, stone or wood.

1. General Purpose wall plug  
 Generally aerated blocks should not be used to support heavy loads, use a specialist fitting in this case. For light loads, general - purpose wall plugs can be used.

2. Plasterboard wall plug  
 For use when attaching light loads on to plasterboard partitions.

3. Cavity Fixing wall plug  
 For use with plasterboard partitions or hollow wooden doors.

4. Cavity Fixing - Heavy Duty wall plug  
 For use when fitting or supporting heavy loads such as shelving, wall cabinets and coat racks.

5. Hammer Fixing wall plug  
 For use with walls stuck with plasterboard. The hammer fixing allows it to be fixed to the wall rather than the plasterboard. Always check the fixing is secure to the retaining wall.

6. Shield Anchor wall plug - Heavy loads  
 For use with heavier loads such as TV and Hi-Fi speakers and satellite dishes etc.

⚠ Care and maintenance  
 Safety: Periodically check all fittings and wall fixings to ensure they have not come loose and retighten as necessary
